### 12 Semiseparable

Define matrices  $E_u(p)$  and  $E_l(q)$  as following,

$$E_u(p) = \begin{cases} 1, & \text{if } i \leqslant j - p, \\ 0, & \text{otherwise.} \end{cases} \quad \text{and} \quad E_l(q) = \begin{cases} 1, & \text{if } i \geqslant j - q, \\ 0, & \text{otherwise.} \end{cases}$$
 (1)

i.e.

where  $|p| \leqslant n-1$  and  $|q| \leqslant n-1$ .

Define the operations triu and tril,

$$triu(A, p) = A \circ E_u(p) \tag{4}$$

$$tril(A,q) = A \circ E_l(q) \tag{5}$$

i.e. triu (A, p) retains the entries of A above the p-th super-diagonal (inclusive) and makes the entries of A below the p-th super-diagonal (exclusive) 0.

define symmetric  $\{1,1\}$ -semiseparable matrix, S

$$S = \begin{cases} x_i y_j & \text{if } i \leqslant j ; \\ x_j y_i & \text{if } i \geqslant j. \end{cases}$$
 (6)

$$= \operatorname{triu}(xy^{\mathrm{T}}) + \operatorname{tril}(yx^{\mathrm{T}}, -1) \tag{7}$$

$$= \operatorname{triu}(xy^{\mathrm{T}}, 1) + \operatorname{tril}(yx^{\mathrm{T}}) \tag{8}$$

$$= \begin{bmatrix} x_1y_1 & x_1y_2 & \cdots & x_1y_n \\ x_1y_2 & x_2y_2 & \cdots & x_2y_n \\ \vdots & \vdots & \ddots & \vdots \\ x_1y_n & x_2y_n & \cdots & x_ny_n \end{bmatrix}$$
(9)

#### Matrix (basic def) **13**

 ${\bf Matrix\text{-}Matrix\ Multiplication}$ 

$$AB = C (10)$$

$$c_{ij} = \sum_{k=1}^{n} a_{ik} b_{kj} \tag{11}$$

Matrix-Vector Multiplication

$$Ax = b (12)$$

$$Ax = b$$

$$b_i = \sum_{k=1}^{n} a_{ik} x_k$$
(12)

#### Algorithm (Appendix) 14

#### **Backward Substitution**

$$Ux = b (14)$$

#### Triangular Matrix

$$\begin{bmatrix} d_1 & u_1^1 & u_1^2 & \cdots & \cdots & u_1^{n-1} \\ d_2 & u_2^1 & u_2^2 & \cdots & u_2^{n-2} \\ & \ddots & \ddots & \ddots & \vdots \\ & & d_{n-2} & u_{n-2}^1 & u_{n-1}^2 \\ & & & d_n - 1 & u_{n-1}^1 \\ & & & & d_n \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ \vdots \\ x_{n-2} \\ x_{n-1} \\ x_n \end{bmatrix} = \begin{bmatrix} b_1 \\ b_2 \\ \vdots \\ b_{n-2} \\ b_{n-1} \\ b_n \end{bmatrix}$$

$$(15)$$

$$x_n = b_n / u_{nn} \tag{16}$$

$$Y_i^{\mathrm{T}} \coloneqq (D_i X_i)^{-1} \text{ for } i = 2, \dots, k+1$$

### 18 28.06.2022 Meeting formal

#### 18.1 Notation

This notes use Householder notation and start indexing at one.

Scalars, lower case Greek letters:  $\alpha$ ,  $\beta$ ,  $\gamma$ ,  $\chi$ , etc. Vectors, lower case Roman letter: a, b, c, x, etc. Matrix, upper case Roman letter: A, B, C, X, etc.

### 18.2 Repersentation

#### Matrix & Vector

$$x = \begin{bmatrix} \chi_1 \\ \chi_2 \\ \vdots \\ \chi_n \end{bmatrix} \in \mathbb{R}^n$$

$$A = \begin{bmatrix} \alpha_{11} & \alpha_{12} & \cdots & \alpha_{1n} \\ \alpha_{21} & \alpha_{22} & \cdots & \alpha_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ \alpha_{m1} & \alpha_{m2} & \cdots & \alpha_{1n} \end{bmatrix}$$

$$= \begin{bmatrix} a_1 & a_2 & \cdots & a_n \end{bmatrix} \in \mathbb{R}^{m \times n}$$

#### Block Matrix & Block Vector

$$x = \begin{bmatrix} x_1 \\ x_2 \\ \vdots \\ x_n \end{bmatrix} \in \mathbb{R}^{kn}, x_i \in \mathbb{R}^k$$

$$A = \begin{bmatrix} A_{11} & A_{12} & \cdots & A_{1n} \\ A_{21} & A_{22} & \cdots & A_{2n} \\ \vdots & \vdots & \vdots & \vdots \\ A_{m1} & A_{m2} & \cdots & A_{1n} \end{bmatrix}$$

$$= \begin{bmatrix} A_1 & A_2 & \cdots & A_n \end{bmatrix} \in \mathbb{R}^{lm \times kn}, A_{ij} \in \mathbb{R}^{l \times k}$$

### 18.3 Content

Consider an upper banded matrix  $U \in \mathbb{R}^{n \times n}$ ,

$$U = \begin{bmatrix} \alpha_1 & \beta_1^1 & \beta_1^2 & \dots & \beta_1^u \\ & \alpha_2 & \beta_2^1 & \beta_2^2 & \dots & \beta_2^u \\ & & \ddots & \ddots & & \ddots \\ & & & \ddots & \ddots & & \vdots \\ & & & & \ddots & \ddots & & \vdots \\ & & & & \ddots & \ddots & & \vdots \\ & & & & \ddots & \ddots & & \vdots \\ & & & & & \ddots & \ddots & \beta_{n-2}^2 \\ & & & & & \ddots & \ddots & \beta_{n-1}^1 \\ & & & & & & \alpha_n \end{bmatrix} .$$
 (54)

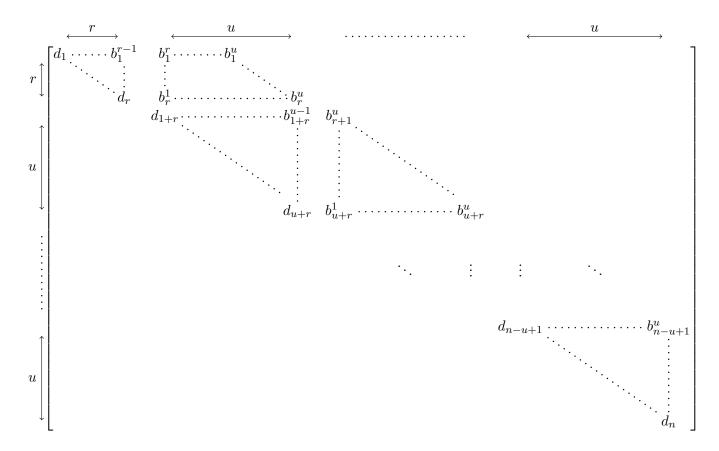

Then try to show that its inverse can be repersent as the upper triangular part of an outer product, i.e.,

$$U^{-1} = \operatorname{triu}(XY^{\mathrm{T}}) \tag{55}$$

Let  $X, Y \in \mathbb{R}^{n \times u}$ , consider the following cases of n,

### Case 1, n = ku

then (54) can be repersent as a block upper bidiagonal matrix,

Repersent the *n*-dimensional identity matrix  $I_{n\times n}$  in block form,

$$I_{n\times n} = I_{ku\times ku} = \operatorname{diag}(\underbrace{I_{u\times u}, \ I_{u\times u}, \ \cdots, \ I_{u\times u}}) = [E_1 \mid E_2 \mid \cdots \mid E_k].$$

then, its block columns  $E_i$  for i = 1, 2, ..., k satisfies

$$E_i \in \mathbb{R}^{ku \times u}$$

$$E_i^{\mathrm{T}} E_j = \begin{cases} I_{u \times u}, & \text{if } i = j ; \\ 0_{u \times u}, & \text{otherwise.} \end{cases}$$

To find X and Y such that (55) holds, let

$$X = \begin{bmatrix} X_1 \\ X_2 \\ \vdots \\ X_{k-1} \\ X_k \end{bmatrix} \in \mathbb{R}^{ku \times u}, Y = \begin{bmatrix} Y_1 \\ Y_2 \\ \vdots \\ Y_{k-1} \\ Y_k \end{bmatrix} \in \mathbb{R}^{ku \times u}, X_i, Y_i \in \mathbb{R}^{u \times u} \text{ for } i = 1, 2, \dots, k,$$

and let  $X_k$  and  $Y_k^{\rm T}$  be upper triangular matrix, then  ${\rm triu}(X_kY_k^{\rm T})=X_kY_k^{\rm T}.$  For the outer product form,

$$\begin{split} Y^{\mathrm{T}} &= \left[ \begin{array}{c|c|c} Y_{1}^{\mathrm{T}} & Y_{2}^{\mathrm{T}} & \cdots & Y_{k-1}^{\mathrm{T}} & Y_{k}^{\mathrm{T}} \end{array} \right] \in \mathbb{R}^{u \times k u} \\ XY^{\mathrm{T}} &= \begin{bmatrix} X_{1} \\ X_{2} \\ \vdots \\ X_{k-1} \\ X_{k} \end{bmatrix} \left[ \begin{array}{c|c|c} Y_{1}^{\mathrm{T}} & Y_{2}^{\mathrm{T}} & \cdots & Y_{k-1}^{\mathrm{T}} & Y_{k}^{\mathrm{T}} \end{array} \right] \\ &= \begin{bmatrix} X_{1}Y_{1}^{\mathrm{T}} & X_{1}Y_{2}^{\mathrm{T}} & \cdots & X_{1}Y_{k-1}^{\mathrm{T}} & x_{1}Y_{k}^{\mathrm{T}} \\ X_{2}Y_{1}^{\mathrm{T}} & X_{2}Y_{2}^{\mathrm{T}} & \cdots & X_{2}Y_{k-1}^{\mathrm{T}} & x_{2}Y_{k}^{\mathrm{T}} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ X_{k-1}Y_{1}^{\mathrm{T}} & X_{k-1}Y_{2}^{\mathrm{T}} & \cdots & X_{k-1}Y_{k-1}^{\mathrm{T}} & X_{k-1}Y_{k}^{\mathrm{T}} \\ X_{k}Y_{1}^{\mathrm{T}} & X_{k}Y_{2}^{\mathrm{T}} & \cdots & X_{k}Y_{k-1}^{\mathrm{T}} & X_{k}Y_{k}^{\mathrm{T}} \end{array} \right] \\ &= X \left[ \begin{array}{c|c|c} Y_{1}^{\mathrm{T}} & Y_{2}^{\mathrm{T}} & \cdots & Y_{k-1}^{\mathrm{T}} & Y_{k}^{\mathrm{T}} \\ \end{array} \right] \\ &= \left[ \begin{array}{c|c|c} XY_{1}^{\mathrm{T}} & XY_{2}^{\mathrm{T}} & \cdots & XY_{k-1}^{\mathrm{T}} & XY_{k}^{\mathrm{T}} \end{array} \right] \in \mathbb{R}^{ku \times ku}, \end{split}$$

and its the upper triangular componnent,

$$\operatorname{triu}(XY^{\mathrm{T}}) = \begin{bmatrix} \operatorname{triu}(X_{1}Y_{1}^{\mathrm{T}}) & X_{1}Y_{2}^{\mathrm{T}} & \cdots & X_{1}Y_{k-1}^{\mathrm{T}} & X_{1}Y_{k}^{\mathrm{T}} \\ 0_{u\times u} & \operatorname{triu}(X_{2}Y_{2}^{\mathrm{T}}) & \cdots & X_{2}Y_{k-1}^{\mathrm{T}} & X_{2}Y_{k}^{\mathrm{T}} \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ 0_{u\times u} & 0_{u\times u} & \cdots & \operatorname{triu}(X_{k-1}Y_{k-1}^{\mathrm{T}}) & X_{k-1}Y_{k}^{\mathrm{T}} \\ 0_{u\times u} & 0_{u\times u} & \cdots & 0_{u\times u} & X_{k}Y_{k}^{\mathrm{T}} \end{bmatrix}$$

$$= \begin{bmatrix} \operatorname{triu}(X_{1}Y_{1}^{\mathrm{T}}) & X_{1}Y_{2}^{\mathrm{T}} \\ 0_{(k-2)u\times u} & \operatorname{triu}(X_{2}Y_{2}^{\mathrm{T}}) \\ 0_{u\times u} & 0_{(k-2)u\times u} \end{bmatrix} \cdots \begin{bmatrix} X_{1:k-2}Y_{k-1}^{\mathrm{T}} \\ \operatorname{triu}(X_{k-1}Y_{k-1}^{\mathrm{T}}) \\ 0_{u\times u} \end{bmatrix} zz$$

$$(57)$$

From (55),

$$I_{n \times n} = U \operatorname{triu}(XY^{\mathrm{T}}). \tag{58}$$

For X and  $Y_k$ , from (57), the k-th block column of (58) can be written as,

$$E_k = U \operatorname{triu}(XY^{\mathrm{T}}) E_k$$
  

$$E_k = UXY_k^{\mathrm{T}}$$
(59)

Define that

$$X := U^{-1}E_k; \tag{60}$$

$$Y_k^{\mathrm{T}} \coloneqq I_{u \times u},\tag{61}$$

which can be shown that (59) holds for the defined (60) and (61) through

$$UXY_k^{\mathrm{T}} = UU^{-1}E_kI_{u\times u}$$

$$= I_{n\times n}E_kI_{u\times u}$$

$$= E_kI_{u\times u}$$

$$= E_k, \text{ as required.}$$

Then, for  $Y_{k-1}$ , forming the (k-1)-th block column of (58) from (57) first,

$$\begin{split} E_{k-1} &= U \operatorname{triu}(XY^{\mathrm{T}}) E_{k-1} \\ &= U \begin{bmatrix} X_{1:k-2} Y_{k-1}^{\mathrm{T}} \\ \operatorname{triu}(X_{k-1} Y_{k-1}^{\mathrm{T}}) \\ 0_{u \times u} \end{bmatrix}. \end{split}$$

Focusing on the (k-1)-th block row of (k-1)-th block column,

$$E_{k-1}^{T}E_{k-1} = E_{k-1}^{T}U \begin{bmatrix} X_{1:k-2}Y_{k-1}^{T} \\ \text{triu}(X_{k-1}Y_{k-1}^{T}) \\ 0_{u \times u} \end{bmatrix}$$

$$I_{u \times u} = \begin{bmatrix} 0_{u \times (k-2)u} \mid D_{k-1} \mid B_{k-1} \end{bmatrix} \begin{bmatrix} X_{1:k-2}Y_{k-1}^{T} \\ \hline \text{triu}(X_{k-1}Y_{k-1}^{T}) \\ 0_{u \times u} \end{bmatrix}$$

$$I_{u \times u} = D_{k-1} \operatorname{triu}(X_{k-1}Y_{k-1}^{T}). \tag{62}$$

Define that

$$Y_{k-1}^{\mathrm{T}} := (D_{k-1}X_{k-1})^{-1}, \tag{63}$$

and notice that  $D_{k-1} \in \mathbb{R}^{u \times u}$  is a upper triangular, therefore

$$D_{k-1} = \text{triu}(D_{k-1});$$
  

$$D_{k-1}^{-1} = \text{triu}(D_{k-1}^{-1}).$$
(64)

With the fact (64), (62) holds for the defined (63) as,

$$\begin{split} D_{k-1} \operatorname{triu}(X_{k-1} Y_{k-1}^{\mathrm{T}}) &= D_{k-1} \operatorname{triu}(X_{k-1} (D_{k-1} X_{k-1})^{-1}) \\ &= D_{k-1} \operatorname{triu}(X_{k-1} X_{k-1}^{-1} D_{k-1}^{-1}) \\ &= D_{k-1} \operatorname{triu}(D_{k-1}^{-1}) \\ &= D_{k-1} D_{k-1}^{-1} \\ &= I_{u \times u}, \text{ as required.} \end{split}$$

Similar ideas can be use to redefine  $Y_k^{\mathrm{T}}$  in (61), from (60),

$$E_k = UX$$

$$E_k^{\mathrm{T}} E_k = E_k^{\mathrm{T}} UX$$

$$I_{u \times u} = E_k^{\mathrm{T}} UX$$

$$= \left[ 0_{u \times (k-1)u} \mid D_k \right] \left[ \frac{X_{1:k-1}}{X_k} \right]$$

$$= D_k X_k$$

$$I_{u \times u} = (D_k X_k)^{-1},$$

following that

$$Y_k^{\mathrm{T}} := I_{u \times u}$$
$$:= (D_k X_k)^{-1}.$$

In summary, for  $U \in \mathbb{R}^{ku \times ku}$ , (55) holds the following definitions of X and Y:

$$X := U^{-1}E_k$$
$$Y_i^{\mathrm{T}} := (D_iX_i)^{-1}$$
